Sharing Is Caring! Push Your Cloud Application to an OCI Registry

Europe 2020

Silvin Lubecki & Djordje Lukic, Docker

Silvin Lubecki Senior software engineer Docker @silvin_docker

Djordje Lukic Senior software engineer Docker @rumpl

Outline:

- How registries work
- Case Study

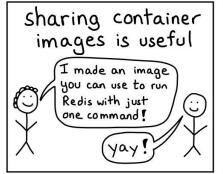

Part 1 - How registries work

What is container registry?

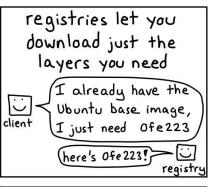

JULIA EVANS @bork

container registries

wizardzines.com @b0rk

OCI specifications 101

Established in 2015 under the Open Container Initiative (OCI) organisation

Split into three specifications (github.com/opencontainers)

- <u>Distribution</u> (v1.0.0-rc0 / 2019-02-14)
- <u>mage</u> (v1.0.1 / 2017-11-08)
- Runtime (v1.0.1 / 2017-11-08)

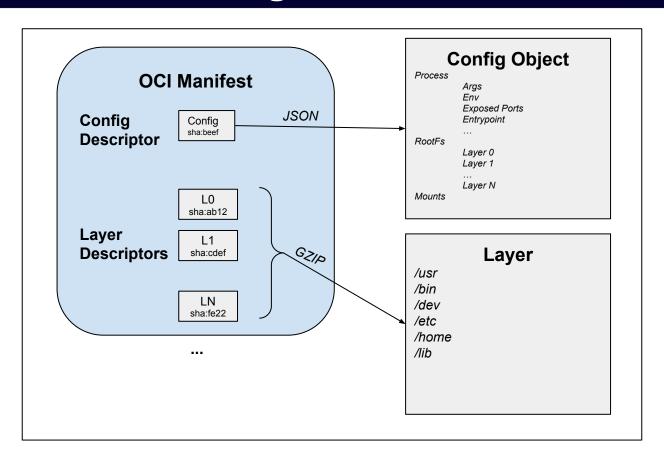

Also under the OCI organisation

- <u>runc</u>
- go-digest

What is an OCI image?

What is an OCI image? Manifest

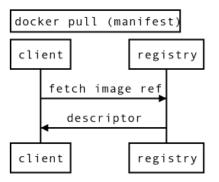

```
1 {
     "schemaVersion": 2,
    "config": {
       "mediaType": "application/vnd.oci.image.config.v1+json",
      "size": 7023,
       "digest": "sha256:b5b2b2c507a0944348e0303114d8d93aaaa081732b86451d9bce1f432a537bc7"
    },
    "layers": [
         "mediaType": "application/vnd.oci.image.layer.v1.tar+gzip",
10
         "size": 32654,
11
         "digest": "sha256:9834876dcfb05cb167a5c24953eba58c4ac89b1adf57f28f2f9d09af107ee8f0"
13
      },
14
         "mediaType": "application/vnd.oci.image.layer.v1.tar+gzip",
15
16
         "size": 16724.
17
         "digest": "sha256:3c3a4604a545cdc127456d94e421cd355bca5b528f4a9c1905b15da2eb4a4c6b"
18
      },
19

What is a multi-arch OCI image? (KubeCon Europe 2020)

What is an OCI image? Index

```
1 {
    "schemaVersion": 2,
     "manifests": [
         "mediaType": "application/vnd.oci.image.manifest.v1+json",
 5
         "size": 7143,
         "digest": "sha256:e692418e4cbaf90ca69d05a66403747baa33ee08806650b51fab815ad7fc331f",
        "platform": {
 8
           "architecture": "ppc64le",
10
           "os": "linux"
11
12
      },
13
14
         "mediaType": "application/vnd.oci.image.manifest.v1+json",
15
         "size": 7682,
16
         "digest": "sha256:5b0bcabd1ed22e9fb1310cf6c2dec7cdef19f0ad69efa1f392e94a4333501270",
17
         "platform": {
18
           "architecture": "amd64",
           "os": "linux"
19
20
21
22
23 }
```

What is a repository?

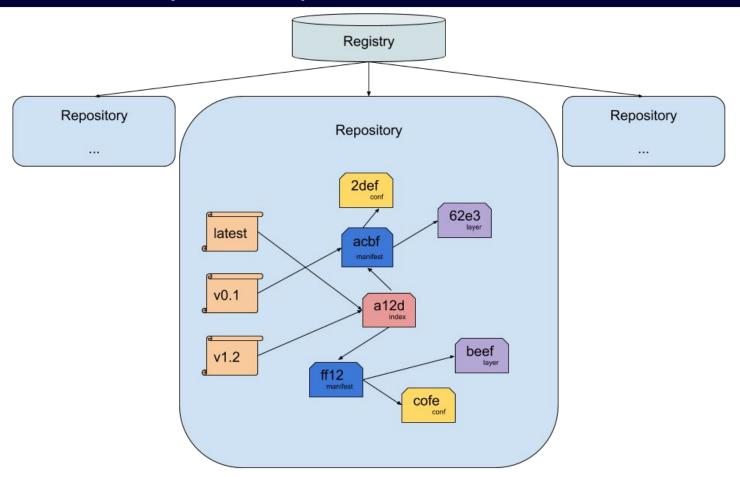

Image reference vs tag vs digest

Syntax	Example
(1) repository	nginx => docker.io/library/nginx:latest
(2) namespace/repository	docker/dcl2020 => docker.io/docker/dcl2020:latest
(3) registry:port/namespace/repository	example.com:5000/user/repo => example.com:5000/user/repo:latest
(4) registry:port/namespace/repository:tag	example.com:5000/user/repo:v1.0.0
(5) registry:port/namespace/repository@algorithm:digest	example.com:5000/user/repo@sha256:38cfa07247
(6) registry:port/namespace/repository:tag@algorithm:digest	example.com:5000/user/repo:v1.0.0@sha256:38cfa07247 => example.com:5000/user/repo@sha256:38cfa07247

Part 2 - Case study Push a CNAB using OCI building blocks

What is a CNAB?

"CNAB is a standard packaging format for multi-component distributed applications. It is not a platform-specific tool, and developers can bundle applications targeting environments spanning laaS (like OpenStack or Azure), container orchestrators (like Kubernetes or Nomad), container runtimes (like local Docker or ACI), and cloud platform services (like object storage or Database as a Service)."

```
$ porter build <bundle>
$ porter publish <bundle>
$ docker app install <bundle>
$ duffle uninstall <bundle>
```

github.com/cnabio/cnab-spec for more information

What is a bundle.json?

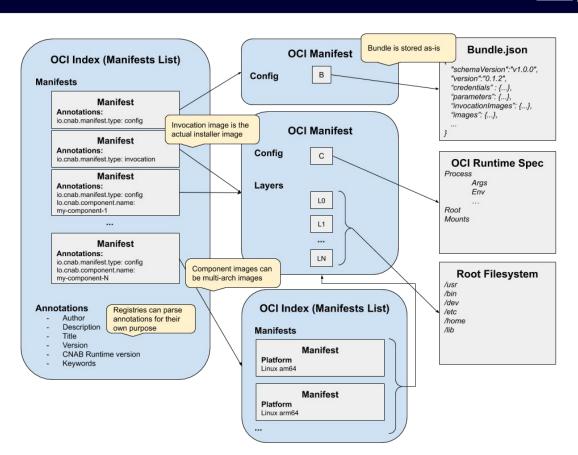

```
1 {
    "name": "helloworld",
     "description": "An example hello world Cloud-Native Application Bundle",
    "invocationImages": [
      {
        "contentDigest": "sha256:c00ffee...",
        "image": "example/helloworld:0.1.0",
        "imageType": "docker"
 9
10
    "images": {
12
      "my-microservice": {
        "contentDigest": "sha256:deadbeef....",
13
        "description": "my microservice",
14
        "image": "example/microservice:1.2.3"
15
16
17
    },
    "credentials": {
19
      "hostkey": {
20
        "env": "HOST_KEY",
21
        "path": "/etc/hostkey.txt"
22
23
    },
     "parameters": {
      "backend_port": {
25
        "definition": "http_port",
26
27
        "description": "The port that the back-end will listen on",
        "destination": {
28
           "env": "BACKEND PORT"
29
30
31
32
     "definitions": {
      "http_port": {}
35
36 }
```

Push a bundle as an OCI index

Demo!

Battle scars with the registry landscape

Registry	CNAB compatible
ACR	Yes
Artifactory	No
Docker Hub	Yes
Digital Ocean	Yes
ECR	No
GCR	Yes
Github Packages	No
Nexus	No
Quay	No

Main issues discovered:

- OCI Index not supported, only Docker Manifest lists format (Docker Hub before 2019)
- Could not push without tagging (ECR)
- Can't mix Manifest lists with OCI Indexes (bundle using service images from multiple vendors)
- Empty or no layer (for storing config object) (GCR)
- No multi-arch support (Nexus)
- Custom Mediatype forbidden

Future of OCI Specifications

- OCI conformance tests https://conformance.opencontainers.org/
- Artifacts

Tools and libraries to play with images

- github.com/docker/distribution
- github.com/containerd/containerd
- github.com/google/go-containerregistry
- <u>github.com/wagoodman/dive</u> to check what's inside an image
- github.com/cnabio/cnab-to-oci
